Custom domain on Keenetic router

> Инструкция работает если у вас есть белый статичный ip-адрес и свой домен

Check settings:

- `Domain name` must Enabled `Remote web interface connections`

Setup certificate for domain

- Connect to CLI as `<router_ip>/a`
- Check existing domains:

```
ip http ssl acme list
```

- Add your domain name:

```
ip http ssl acme get <subdomain>.annndruha.space
```

Setup proxy for subdomain

- Check current proxy rules

```
show ip http proxy
```

- Add new proxy route
  (config)>

```
ip http proxy <subdomain>
```

  (config-http-proxy)>

```
domain static annndruha.space
upstream http 192.168.1.3 4242
```

allow public
